Corporate Transformation Underway

Oil Search is in excellent position to build further value for shareholders. Platform of unprecedented strength:

» PNG LNG Project sales commenced in May 2014. Transforms OSH into significant LNG exporter with steady 20+ year cash flow stream, sufficient to fund both growth opportunities and pay materially higher dividends

» Highlands and PRL 15 LNG expansion opportunities being matured. Potential involvement in two, possibly three, additional high returning LNG trains by end of decade:
  – Possibility of more than doubling production over next 5 – 7 years, off 2015 base

» Taza oil discovery in Kurdistan being appraised, positive results to date

» Balance sheet strengthened by recent placement to PNG Government and SPP

» Strategic Review underway. Will set direction for next five years
Core Strategies Have Delivered Steady Long-Term Share Price Appreciation

- Acquisition of ChevronTexaco’s PNG assets. Assume Operatorship
- Manage transition to PNG LNG Project
- PNG LNG FID
- PRL 15 acquisition
- PNG LNG production and sales commence
PNG LNG Project Train 1 commenced production in April, Train 2 in May, both ahead of schedule.

Ramp up to full capacity (6.9 MTPA) in progress.

LNG shipments to Asian markets commenced late May, with first cargos being sold on spot market, prior to start of long term contract sales.

Project expected to be delivered within November 2012 budget of US$19 billion.

Hides liquids being blended with oil field production and sold as Kutubu Blend.

Gas Growth Strategy

» Oil Search looking to leverage existing LNG infrastructure and skills developed by foundation PNG LNG Project

» Upside in 1P reserves at Hides plus substantial discovered undeveloped gas resources

» Oil Search well positioned to realise value from future phases of development, as significant resource and infrastructure owner and proven operator

» PNG remains an attractive investment location
> Six production wells at three wellpads (B, C and D) complete

> Drilling ongoing: two wells at wellpad G (NW Hides) and PWD well. Will help constrain gas volume in Hides field

> Hides 5 planned to explore Koi-lange reservoir (~700m below Toro), with drilling scheduled to commence in 4Q14
P’nyyang - PRL 3

» Key resource to support potential growth from PNG LNG:
  – Total 2C recoverable gas resources in P’nyang field of 2.5 tcf

» Concept selection work well advanced – engineering, environmental and social mapping

» Development work to continue through to submission of PDL application in early 2015

» 22.8% gross interest in PRL 15, containing Elk/Antelope gas fields

» Up to three appraisal wells to be drilled, to prove up sufficient gas resources to support LNG development. First well expected to spud in 3Q14

» Substantial exploration and appraisal upside in PRL 15

» Dispute resolution process underway relating to sale of interest in PRL 15 from InterOil to Total SA. Negotiations to achieve commercial resolution ongoing
Strong production from PNG oil fields

» Reservoir performance from key oil fields remains strong

» Continued success of development drilling and field management activities

» Commissioning gas delivered from Kutubu to PNG LNG Plant (September) and HGCP (December)

» PNG LNG Hides liquids being blended with oil field production and sold as Kutubu Blend
Production Outlook

» Total production guidance for 2014 increased from 14.5 – 17.5 mmboe to 17 – 20 mmboe, due to commencement of LNG production from Train 1 (April) and Train 2 (May) ahead of schedule

» Production from oil fields of 6.4 – 6.9 mmboe (unchanged), up slightly from 2013

» In first full year (2015), PNG LNG will add ~21 mmboe net to Oil Search production

1 LNG sales products at outlet of plant, post fuel and flare
2 Oil forecast assumes planned new development wells beyond 2013
3 Gas:oil conversion rate used in 2014/15: 5,100 scf = 1 barrel of oil equivalent (prior years 6,000 scf/boe)
Oil Discovery at Taza, Kurdistan: Appraisal Underway
Oil Discovery at Taza, Kurdistan: Appraisal Underway

- Taza 2 appraisal well has found oil in Jeribe, Dhiban and Euphrates Formations. Presently drilling towards deeper Shiranish Formation, not penetrated by Taza 1
- Taza 3, to appraise southern part of field, planned to spud in 3Q14, plus two more wells and 3D seismic
- Plan to install Early Production Facility (EPF) on one well in 2015
- 3D seismic acquisition underway, including over SE Jambur lead
- New export pipeline through Kurdistan to Turkey operational. Operations have not been impacted by recent unrest in Iraq
Positioning for Next Phase of Growth

» Major Strategic Review underway to set objectives and programmes for Oil Search over next five years

» Review will analyse:
  – Asset values and ways to capture full value
  – Balance of asset portfolio to deliver growth projects and capital management initiatives
  – Company structure, cost base and operating model
  – Development of our people and organisation, to deliver continued top quartile returns

» Results to be communicated to shareholders in 3Q14
Oil Search has unprecedented platform for further growth:

» Delivery of PNG LNG will more than quadruple production 2013 – 2015:
  – Delivers material cash flow to invest in high returning projects and fund higher dividends

» Assets have potential to underwrite at least two further LNG trains and expansions

» Taza oil discovery has significant potential. Appraisal taking place

» Oil business remains strong

» Balance sheet will strengthen rapidly with LNG revenues

» Strategic Review will provide programme to deliver continued superior returns
Appendix 1: Key metrics

Production (mmboe)

NPAT (US$m)

Oil Price (US$/bbl)

DPS (US cents)
Appendix 2: Treasury Update

» Total liquidity of US$711.2 million at end 1Q14 comprising US$411.2 million cash and US$300 million available under non-amortising corporate revolving facility

» Additional A$184 million raised under SPP in May

» US$250 million of funding lines, including L/C facilities to access cash in LNG Project secured accounts, have been established to provide additional near-term funding flexibility

» US$3.91 billion (OSH share) drawn down under PNG LNG Project finance facility at end 1Q14

» 2013 final unfranked dividend of two US cents per share, fully funded via underwritten DRP
Appendix 3: Investment Outlook

Guidance Range
(US$1,175 – 1,415m)$^1$

$^1$ Excludes US$900m upfront payment for acquisition of 22.835% interest in PRL 15, completed March 2014.

$^2$ Includes capex associated with appraisal activity in PRL 15

Numbers may not add due to rounding.

\(^1\) Gas volumes have been converted to barrels of oil equivalent using an Oil Search specific conversion factor of 5,100 scf per boe, which represents a weighted average, based on Oil Search’s reserves portfolio, using the actual calorific value of each gas volume at its point of sale. The change to a specific boe conversion factor more closely reflects the energy content of the Company’s gas reserve portfolio compared to the previous conversion factor of 6,000 scf per boe.
